INTRODUCTORY REMARKS BY CHIEF INSPECTOR

The increase of 444,125 tons of coal mined in Colorado during 1955 is encouraging after the low peak in the 1954 production.

Some progress is being made toward the development of proposed chemical plants within the State, and at this time, two electric generating plants are in the process of construction. One of these plants is being built a few miles north of Denver; the other is near the Cameo Mine about 18 miles east of Grand Junction.

There is a definite possibility that more electric generating plants will be built in other parts of the State in the near future because of the rapid increase in the demand for electricity.

Through the efforts of the Colorado Coal Committee, the United States Senators Eugene D. Millikin and Gordon Allott, Colorado received special consideration in being able to cope with prohibitive freight rates, for competitive bidding in coal to be exported. As a result of exhaustive contacts, the C. F. & I. sales department submitted the successful bid to furnish two cargoes of coal, @ 10,000 short tons each, to be shipped to Korea. This bituminous coal which was produced from the Harris, Edna Strip and Osage Strip Mines in Routt County is the first record of any cargoes of coal to be shipped overseas from the State of Colorado.

Examinations conducted for Coal Mine Officials in 1955 were not attended by a sufficient number to supply the increased demand for officials. A list of the successful candidates of last year is on page 30 of this report.

There is an increasing need for an educational program for miners who plan to become officials, as there is a noticeable shortage of certified men. Arrangements should be made for local classes for the study of practical coal mining subjects and safe methods of performance in preparation for examination.

The following amendments to the State Coal Mining Laws, as briefly outlined, were adopted by the State Legislature, effective April 15, 1955:

Section 28 - Shot Firers to have at least one year of experience in coal mines and a minimum age of 21 years. Must show a

knowledge of explosives and preparation for handling; the use of the flame safety lamp; and proper ventilation practices.

Section 31 (a) - Any certificate of competence not used for five years shall expire and become null and void.

Section 85 (a) (3) - Where coal is sheared or cut, shots shall not be fired if the blast hole is drilled beyond the limits of the cut.

The C. F. & I. Corp., employing 1,186 men in their three mines in Las Animas County, completed the year with almost 100% training in Accident Prevention and First Aid to the Injured. These mines also appear on the Honor Roll of Safety for the year.
